THE PROBLEM

Election campaigns still rely on **gut feeling** over ground data

■	Unusable Voter Data	Voter lists are 50-page image PDFs — require days of manual data entry before any analysis.
■	No Booth-Level Strategy	Same blanket approach for every polling station. No micro-targeting, no prioritization.
■ ■	Caste Arithmetic on Paper	Community composition discussed in meetings, never connected to actual voter records.
■	No Field Tracking	Contacts, slip delivery, sentiment — all lost in phone calls and WhatsApp groups.
■ ■	Election Day Chaos	No priority list, no real-time turnout tracking, no transport coordination system.
■	History Ignored	Past election patterns and turnout trends never systematically analyzed.

Result: Campaigns waste **40-60%** of field effort on non-convertible voters. No data means no strategy.

THE SOLUTION

From **raw PDF** to **winning strategy** — in 3 steps

■ Instant Intelligence

Upload a scanned PDF voter list. OCR processes ~1 second/page, extracts name, age, gender, house, family — automatically.

■ Smart Enrichment

Auto-detects surnames, maps 60+ communities, groups households, flags youth/senior/first-time voters, assigns unique IDs.

■ Winning Formula

Per-booth: $\text{expected turnout} \times 50\% + 1 = \text{target}$. Confirms Pakka voters. Calculates swing needed. Status: SAFE / WINNABLE / TOUGH.

10-Tab Dashboard — Everything a Campaign Needs

■ Overview Demographics, age distribution, gender charts, community composition, top surnames	■ Strategy Conversion funnel, caste arithmetic, 3-contact plan, family influence, time slots
■ Family Tree Household grouping, family heads, member details, influence mapping	■ Booth Strategy Booth strength meter, winning formula per booth, SAFE/WINNABLE/TOUGH status
■ Voter Data Search, filter, classify, tag every voter. Inline editing. CSV export	■ ■ Tags Scheme beneficiaries, party lean, bulk tagging, scheme coverage analysis
■ History Past election results, party trends, turnout patterns, historical analysis	■ Field Ops Panna Pramukh plan, contact tracking, sentiment analysis, slip distribution
■ ■ Election Day Live turnout tracker, priority pending, transport needs, vote simulator	■ Data Quality Missing fields, duplicates, quality score, volunteer requirement calculator

Upload scanned PDFs — we handle the rest

■ Image PDF

Scanned ECI voter list PDFs processed with native Windows OCR at ~1 second per page

■ Text PDF

Digitally generated PDFs parsed directly with PyMuPDF — instant extraction

■ CSV / TXT

Import voter data from spreadsheets or plain text files

■ Smart Parsing

3 cascading parsers auto-detect ECI roll format, box format, and text format

Auto-Extracted Per Voter (17 fields)

Name | Father Name | Age | Gender | Voter ID (EPIC) | House Number | Serial Number | Booth / Part No | Surname | Community (auto-mapped) | Family ID | Family Size | First-Time Voter | Youth Flag | Senior Flag | Transport Need | Unique NQT ID

Enrichable Fields (field worker edits)

Classification (Pakka/Viroadhi/Swing/Doubtful) | Sentiment | Contact Count | Slip Delivered | Voted | Tags[] | Caste (override) | Party Lean | Beneficiary Status | Migrated | Notes | Influence Score

60+ surnames auto-mapped to communities: Brahmin, OBC, SC, ST, Muslim, Jain, Rajput, Reddy, Kamma, Nair + more — powers caste arithmetic instantly.

Booth-level strategy that **wins elections**

■ Winning Formula

Per-booth math: $\text{Turnout} \times 50\% + 1 = \text{Target Pakka confirmed vs gap}$ Status: SAFE / WINNABLE / TOUGH

Uses historical turnout when available (default 65%). Shows exactly how many swing voters you must convert per booth.

■ 3-Contact Plan

Every Swing voter gets 3 contacts. Prioritized by influence score and family head status.

Auto-generated priority list with stage tracking (need 1st / 2nd / 3rd contact).

■■ Family Influence

Target family heads of 4+ members. Convert head → get family vote.

Shows head classification, sentiment, contact status, and total family potential votes.

■ Time Slot Plan

7-9 AM: Pakka first 9-12 PM: Seniors + Transport 12-3 PM: Remaining 3-5 PM: Final push

Auto-assigns every voter to an optimal election-day time slot.

■ Caste Arithmetic

Per-community Pakka/Virodhi/Swing breakdown with auto-recommendation: CONSOLIDATE (high Pakka) · CONVERT (high Swing) · SPLIT (high Virodhi) · ENGAGE (unclassified)

■■ Vote Share Simulator

Adjust Pakka turnout %, Swing capture %, First-time capture % with sliders. Instant prediction: estimated vote share and WIN / NEEDS MORE EFFORT verdict.

9-Level Hierarchy — drill down or roll up

■	All Data	Aggregated view across everything
■ ■	Region	e.g. South India
■ ■	State	e.g. Karnataka
■	Division	e.g. Gulbarga Division
■	District	e.g. Kalaburagi
■ ■	Taluka	e.g. Aland
■	Hobli	e.g. Aland Hobli
■ ■	Gram Panchayat	e.g. Khajuri GP
■	Village	e.g. Khajuri
■	Ward (leaf)	Editable — all data entry here

- ✓ Select any level — dashboard shows aggregated analytics across all wards below
- ✓ Cascading dropdown navigation — switch levels without leaving the dashboard
- ✓ Multi-ward PDF reports from any hierarchy level
- ✓ Ward-level editing: classify, tag, contact, track — changes persist
- ✓ Merge voters, metadata, and election history from multiple wards
- ✓ Empty levels auto-skipped (no region? goes straight to state)

From strategy room to polling booth

■ Panna Pramukh Plan 1 worker per 25 voters per booth. Auto-generates page assignments with SR number ranges.	■ Contact Tracking Log every voter contact — track 1x, 2x, 3x rates per booth. See gaps in coverage.	■ Sentiment Tracking Positive / Neutral / Negative / Hostile per voter. Per-booth sentiment heatmap for leaders.
■ Slip Distribution Track which voters received their polling slip. Per-booth delivery rates and pending list.	■■ Scheme Beneficiary Tags PM-KISAN, Ujjwala, Ration Card, MNREGA, Pension, DBT — bulk tag with one click.	■ Party Lean Analysis Track party inclination per voter. Analyze distribution across booths and communities.

■■ Election Day War Room

Slot	Target Voters	Strategy	Tools
7-9 AM	Pakka (confirmed)	Get supporters out first	Priority list, phone tree
9-12 PM	Seniors, Women	Transport assistance	Transport pending list
12-3 PM	Remaining voters	Second round push	Door-to-door tracking
3-5 PM	Swing / Doubtful	Final persuasion push	Live turnout dashboard

Live features: Mark voters as voted in real-time · Booth-wise turnout % · Pakka-not-voted priority alerts · Transport coordination · Turnout prediction per booth

PROFESSIONAL REPORTS

16-Section PDF Report — ready to print

01. Executive Summary	02. Voter Demographics	03. Age & Gender Analysis	04. Caste Arithmetic
05. Family & Household	06. Booth Strength Assessment	07. Winning Formula	08. Historical Election Analysis
09. Classification & Funnel	10. Tags & Scheme Coverage	11. 3-Contact Strategy Plan	12. Family Influence Targets
13. Election Day Time Slots	14. Field Operations Plan	15. Data Quality Audit	16. Ground Action Plan

■ One-Click Generation Hit "Download Report" — professional multi-page PDF with cover, TOC, KPI tables, charts, and booth-level strategy.	■ Professional Design Color-coded tables, branded cover page with hierarchy context, confidential header/footer, page numbers.	■ Export Options PDF Report (16 sections) · CSV Export (all voter fields, UTF-8) · JSON Export (full data + metadata).

TECHNOLOGY

Built for speed, privacy & portability

Runs Locally

No cloud dependency. All data stays on your machine. Zero internet required after setup. Complete data sovereignty.

Blazing Fast

OCR ~1s/page. PDF report <1s. Dashboard loads 18 analytics endpoints in parallel. No spinners.

Data Privacy

Voter data never leaves the local machine. No cloud APIs, no external servers. ECI-compliant.

Mobile Responsive

Dark-themed dashboard works on tablets and phones. Field workers classify voters from mobile browser.

Python + Flask

Lightweight stack: PyMuPDF, Windows OCR, ReportLab for PDF, Chart.js for visualizations.

JSON Storage

No database needed. Ward data as JSON files. Easy backup, share, transfer between machines.

Tech Stack: Python 3.13 · Flask · PyMuPDF · WinOCR · ReportLab · Chart.js 4.4 · JSON Storage

COMPETITIVE ADVANTAGE

Why Election Intelligence **wins**

Capability	Election Intelligence	Spreadsheets	Generic CRM
PDF OCR Voter Extraction	✓ Auto (~1s/pg)	✗ Manual entry	✗
Auto Caste/Community Mapping	✓ 60+ surnames	✗	✗
Family/Household Detection	✓ Auto-grouped	✗	✗
Booth-Level Winning Formula	✓ Per-booth	■ Manual calc	✗
